

Hygiene and Sanitation Assessment of Public Sites

All of the sites visited had handwashing facilities
Only 2 out of 10 sites had soap available

E. coli and other diarrhea and disease causing bacteria from feaces were found in:

Markets

Transportation centers

Medical facilities

These bacteria can be killed with soap!

Flush toilets

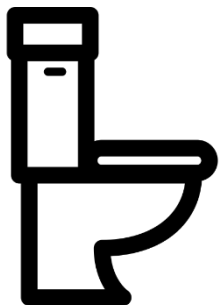

70% were found to be clean

Pit latrines

0% were found to be clean

If customers were taught how to use flush toilets, these would require less management

USER SATISFACTION
